

LAB REPORT ANALYSIS SUMMARY

Patient Name:	Hassan kHan
Age:	13 years
Gender:	Male
Language:	English
Report File:	sterling-accuris-pathology-sample-report-unlocked.pdf
Analyzed:	2026-01-10 16:46:27

SUMMARY

Overall, your lab results show that most of your values are within the expected ranges, which is good. We did note that your WBC Count is a little elevated, which often means your body is responding to something, and your Lymphocytes percentage is a bit low, which might be something to keep an eye on.

ABNORMAL FINDINGS (2)

WBC Count: 10570 /cmm (HIGH) - Range: 4000 - 10000

An elevated white blood cell count can indicate the body is responding to a process.

Lymphocytes: 19 % (LOW) - Range: 20 - 40

A low percentage of lymphocytes may warrant further evaluation.

NORMAL FINDINGS: 11 tests within normal range

CLINICAL SUMMARY (SOAP)

Subjective: Lab reports for Hassan Khan, a 13-year-old male, are being reviewed.

Objective: Objective findings include an elevated white blood cell count of 10570 /cmm and a low lymphocyte percentage of 19%.

Assessment: The presence of an elevated white blood cell count and a low lymphocyte percentage indicates a need for further clinical correlation.

Plan: Further evaluation of these findings is recommended to understand the underlying process.
